

ABSTRACT

The present invention has an object to provide a clothes holding device which is easily assembled (formed) as a clothes holding device (for example, a hanger), and which is compact, light-weighted, and convenient for packaging and conveyance, and further, which has an interior function for use as an interior material.

The present invention provides a device comprising a plate member (10, 10A, 10B, 10C, 10D, 10E, 10F) having flexibility, wherein the plate member is bent on the symmetrical axis (X-axis or Y-axis), and clothes are held with a bent portion (13).

In a status where the clothes are not held, the clothes holding device of the present invention is assimilated with the surface of a wall plane (W), and grasped as a part of interior.

Upon holding of clothes, a vertical-directional lower area (14B) is bent along the horizontal axis (X), and the bent portion (13) and the remaining portion (14T) hold clothes.
